Dear Sir/Madam,

RE: Application For Software Development Apprenticeship

My name is Shadya Obuya, a Software Engineering student at AkiraChix. I am writing to apply for the position of Software Development Apprenticeship, Engineering at Google. I got to learn about this opportunity from my institution's Managing Director, Linda Kamau, and Zakia Mustafa, a Get Ahead EMEA 2020 Scholar and currently, a data scientist at UTU Technologies.

I am currently working on two projects. One is a platform that helps connect animal farmers to the market. Through the use of a web app, farmers can create an account and showcase their products to potential vendors. And the other is a project that aims to digitalize the storage of medical data. Being the project lead, I have learned the importance of communication, teamwork, and breaking down large tasks into smaller tasks.

I believe that the opportunity to be an apprentice at Google will have a great impact on my skills and my growth as a Software Engineer. I love Google Photos, It has always captured my attention. It is like a time machine in the hands of users, taking them through various memories, some of which they might have even forgotten. The ability to store people's memories and later on present them is fascinating. I'm excited about the opportunity to join Google as an apprentice and learn how algorithms on Google Photos work.

I appreciate your consideration and look forward to hearing from you.

Regards,
Shadya Obuya.
