PROFESSIONAL SUMMARY

Obuya is a Software Developer with a keen aptitude for analytical concepts. With her background as a Back-end Software Engineer, she is committed to constructing ethical, scalable, and efficient systems that can address the world's most critical challenges.

SKILLS

- Good understanding of Python and Go for building backend applications.
- Proficient in Django framework for building web applications.
- Ability to build Restful and GraphQL APIs using Django.
- Good knowledge of relational databases including PostgreSQL.
- Ability to implement Caching using Redis.
- Proficiency in writing efficient and scalable Lambda functions for various use cases including scheduled data processing tasks.
- Ability to write effective unit tests with high code coverage to ensure code quality and reliability.
- Proficiency in using Zapier to automate workflows and integrate applications.
- Understanding of git and CI/CD concepts.
- Strong foundation in database modeling and normalization techniques.
- Experience in integrating Docker into development workflows.
- Ability to use use project management tools such as JIRA and coda for feature documentation and tracking.

EXPERIENCE

Software Engineer II Antara Health
09/2023 - Present

- Leading the reliability team to enhance the dependability of the engineering team across all systems, resulting in a decrease in production incidents.
- Collaborated with fellow engineers to build state machines, replacing Zapier. This transition offered enhanced flexibility for quick modifications and simplified error tracing.
- Led the engineering efforts to facilitate a smooth integration of the Smart Application into our billing system, making billing processes more efficient and reliable.
- Drove member engagement growth by leading the engineering team to integrate the Rasayel API into our system.
- Led engineering team in integrating Rasayel events into Mixpanel, streamlining data analysis for the product team and eliminating time-consuming manual reporting processes.

Associate Software Engineer Antara Health
08/2022 - 08/2023

- Collaborated with fellow developers to successfully transfer data from Airtable to Postgres guaranteeing both data consistency and the ability to scale as needed.
- Served as the lead engineer in a project where I designed and developed a user-friendly interface utilizing the Jazzmin library, greatly enhancing the overall user experience.
- Developed and implemented AWS Lambda functions resulting in highly efficient and scalable serverless applications, ultimately improving application performance and resource utilization.
- Actively contributed to the design and development of databases, laying the foundation for secure and organized data management.
- Actively participated in the creation of comprehensive API documentation, providing a valuable resource.
- Streamlined our development processes by configuring and establishing GitHub workflows, automating key steps such as building, testing, and deploying, resulting in increased efficiency and reduced development cycle times.

Software Engineer Apprentice Antara Health
04/2022 - 08/2022

- Built and tested custom Zapier blocks within our systems making it easier to transfer data and trigger actions within our backend system.
- Integrated and tested Zapier automations within our systems improving the efficiency of our processes and enhancing data consistency.
- Worked with the lead Technical Project Manager to visualize and analyze data using Tableau which helped provide a clear and intuitive way to communicate complex data to stakeholders, fostering better understanding and informed actions.

- Implemented and tested Graphql queries and mutations allowing us to efficiently retrieve and modify data for our applications.
- Actively participated in code reviews.

Software Engineer Intern Antara Health
01/2022 - 03/2022

- Participated in code reviews with the product team and gained feedback from senior engineers.
- Took an active role in designing, developing, and implementing API endpoints ensuring a seamless integration with external systems and delivering reliable, secure data access for our applications.
- Worked on minor bug fixes in the front-end web application.

EDUCATION

Completed coursework towards Diploma in Software Engineering AkiraChix
